

Examples

Subtask 1

Allocate tensors in contiguous with pinned memory for higher PCIe bandwidth

Subtask 2

Replace fc1/2/3 GEMMS with fused cublaslt epilogues

<implement hint>

Subtask 3

Replace remaining pointwise kernels by fast in-place ReLU

<implement hint>

Feedback

<Bottleneck analysis>

<dominant kernel>: compute-bound

<system bottleneck>: memcpy

<Nsys & Ncu profiling summary>

<System-level suggestion>: using pinned mem

<Kernel-level suggestion>: using tensor core GEMM
